**ARTEMIS®** tiles are ceiling panels from gypsumboard, with industrially applied **high performance vinyl facing**, and **antimicrobial treatment**.

This is one of their most basic characteristics that secure the need of several companies for a suitable ceiling construction from the hygienic point of view.

**ARTEMIS®** tiles secure a protective shield on your ceiling, while their surface can be cleaned with vacuum cleaner or with wet cloth.

Can also be cleaned by using common house detergents.

Vinyl face is highly resistant to abrasion.

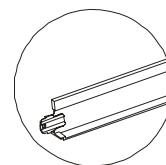

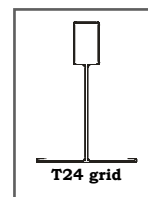

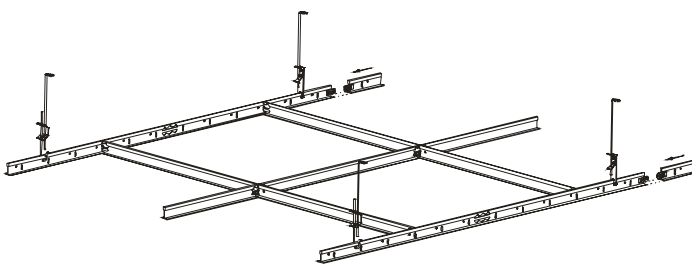

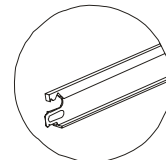

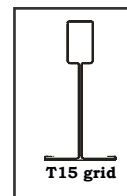

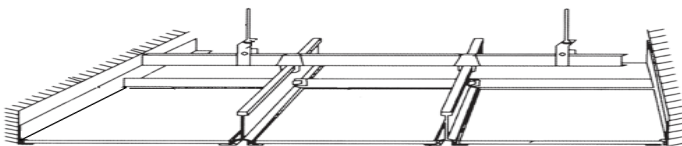

### Description & Technical Characteristics

Material	Surface	Back side	Edges	Thickness	Dimensions
Gypsumboard	High quality vinyl	Aluminum foil	Square	9mm	600x600

Dimension tolerance	Density	Moisture content	NRC	Humidity resistance	Light reflection
- Length / Width $\leq \pm 2.0\text{mm}$ - Thickness $\leq \pm 0.5\text{mm}$	$\leq 780 \text{ kg/m}^3$	$\leq 2\%$	0.1-0.3	Up to 95% relative humidity	0.75

**incombustibility**  
 ACCORDS TO GB8624-1997
